Management's Statement of the Annual Report

The Board of Directors and the Executive Board have today considered and approved the annual report of DCH International A/S for the financial year 1 January to 31 December 2020.

The annual report is prepared in accordance with International Financial Reporting Standards as adopted by the EU and Danish disclosure requirements.

In our opinion, the consolidated financial statements and the parent financial statements give a true and fair view of the Group's and the Parent's financial position at 31.12.2020 and of the results of their operations and cash flows for the financial year 2020.

In our opinion, the management commentary contains a fair review of the development of the Group's and the Parent's business and financial matters, the results for the year and of the Parent's financial position and the financial position as a whole of the entities included in the consolidated financial statements.

We recommend the annual report for adoption at the Annual General Meeting.

Independent auditor's report on the annual report for the period 01.01.2020 - 31.12.2020

Opinion

We have audited the consolidated financial statements and the parent financial statements of DCH International A/S for the financial year 01.01.2020 - 31.12.2020, which comprise the income statement, statement of comprehensive income, balance sheet, statement of changes in equity, cash flow statement and notes, including a summary of significant accounting policies, for the Group as well as the Parent. The consolidated financial statements and the parent financial statements are prepared in accordance with International Financial Reporting Standards as adopted by the EU and additional requirements of the Danish Financial Statements Act.

In our opinion, the consolidated financial statements and the parent financial statements give a true and fair view of the Group's and the Parent's financial position at 31.12.2020, and of the results of their operations and cash flows for the financial year 01.01.2020 - 31.12.2020 in accordance with International Financial Reporting Standards as adopted by the EU and additional requirements of the Danish Financial Statements Act.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) and the additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the Auditor's responsibilities for the audit of the consolidated financial statements and the parent financial statements section of this auditor's report. We are independent of the Group in accordance with the International Ethics Standards Board of Accountants' Code of Ethics for Professional Accountants (IESBA Code) and the additional requirements applicable in Denmark, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Statement on the management commentary

Management is responsible for the management commentary. Our opinion on the consolidated financial statements and the parent financial statements does not cover the management commentary, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the consolidated financial statements and the parent financial statements, our responsibility is to read the management commentary and, in doing so, consider whether the management commentary is materially inconsistent with the consolidated financial statements and the parent financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated.

Moreover, it is our responsibility to consider whether the management commentary provides the information required under the Danish Financial Statements Act.

Based on the work we have performed; we conclude that the management commentary is in accordance with the consolidated financial statements and the parent financial statements and has been prepared in accordance with the requirements of the Danish Financial Statements Act. We did not identify any material misstatement of the management commentary.

Management's responsibilities for the annual reports

Management is responsible for the preparation of consolidated financial statements and parent financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and additional requirements of the Danish Financial Statements Act, and for such internal control as Management determines is necessary to enable the preparation of consolidated financial statements and parent financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements and the parent financial statements, Management is responsible for assessing the Group's and the Parent's ability to continue as a going concern, for disclosing, as applicable, matters related to going concern, and for using the going concern basis of accounting in preparing the consolidated financial statements and the parent financial statements unless Management either intends to liquidate the Group or the Entity or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the annual report

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements and the parent financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with ISAs and the additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements and these parent financial statements.

Independent auditor's report on the annual report for the period 01.01.2020 - 31.12.2020

Auditor's responsibilities for the audit of the annual report (continued)

As part of an audit conducted in accordance with ISAs and the additional requirements applicable in Denmark, we exercise professional judgement and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated financial statements and the parent financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Parent's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.
- Conclude on the appropriateness of Management's use of the going concern basis of accounting in preparing the consolidated financial statements and the parent financial statements, and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the Parent's ability to continue as a going concern.

If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated financial statements and the parent financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group and the Entity to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the consolidated financial statements and the parent financial statements, including the disclosures in the notes, and whether the consolidated financial statements and the parent financial statements represent the underlying transactions and events in a manner that gives a true and fair view.

- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

About us

The second largest pig production in Romania

**10 owned farms
+ rented farms**

**600.000
slaughter pigs/year**

**3 feed factories
950 tons feed/day**

**18.000
reproduction sows**

500 employees

**2.000 ha
arable land**

own truck fleet

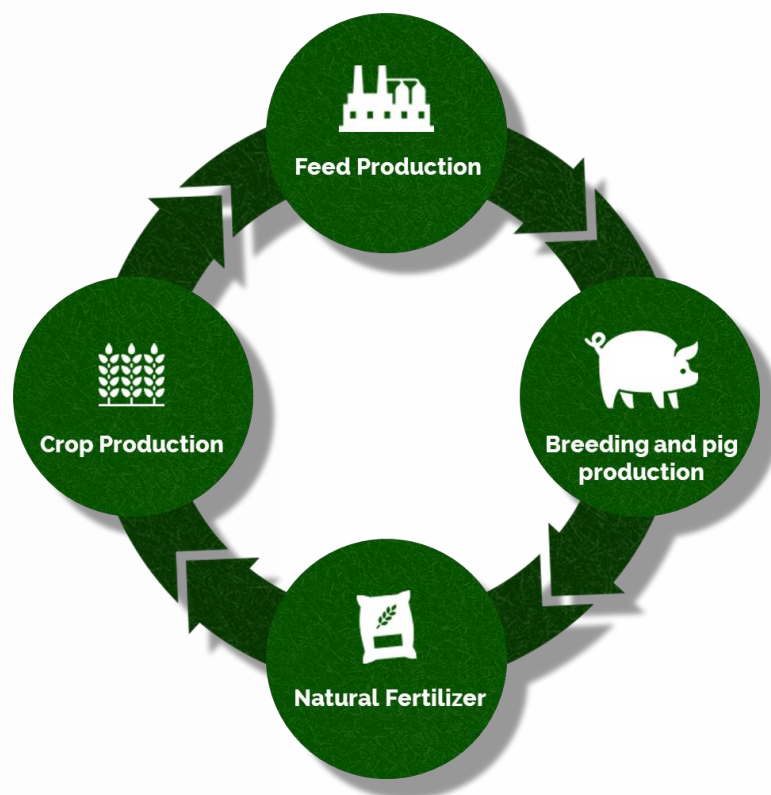

**48.000 tons
cereal storage**

About us

Main activity

As in previous years the main activity has been to operate pig production, focusing on sales of finishers through subsidiaries in Romania. The group manages all activities related to pig production, having all required production divisions: reproduction and genetics, maternity and finisher barns. As secondary activities, the group has its own cereal and feed production divisions as well as manure management.

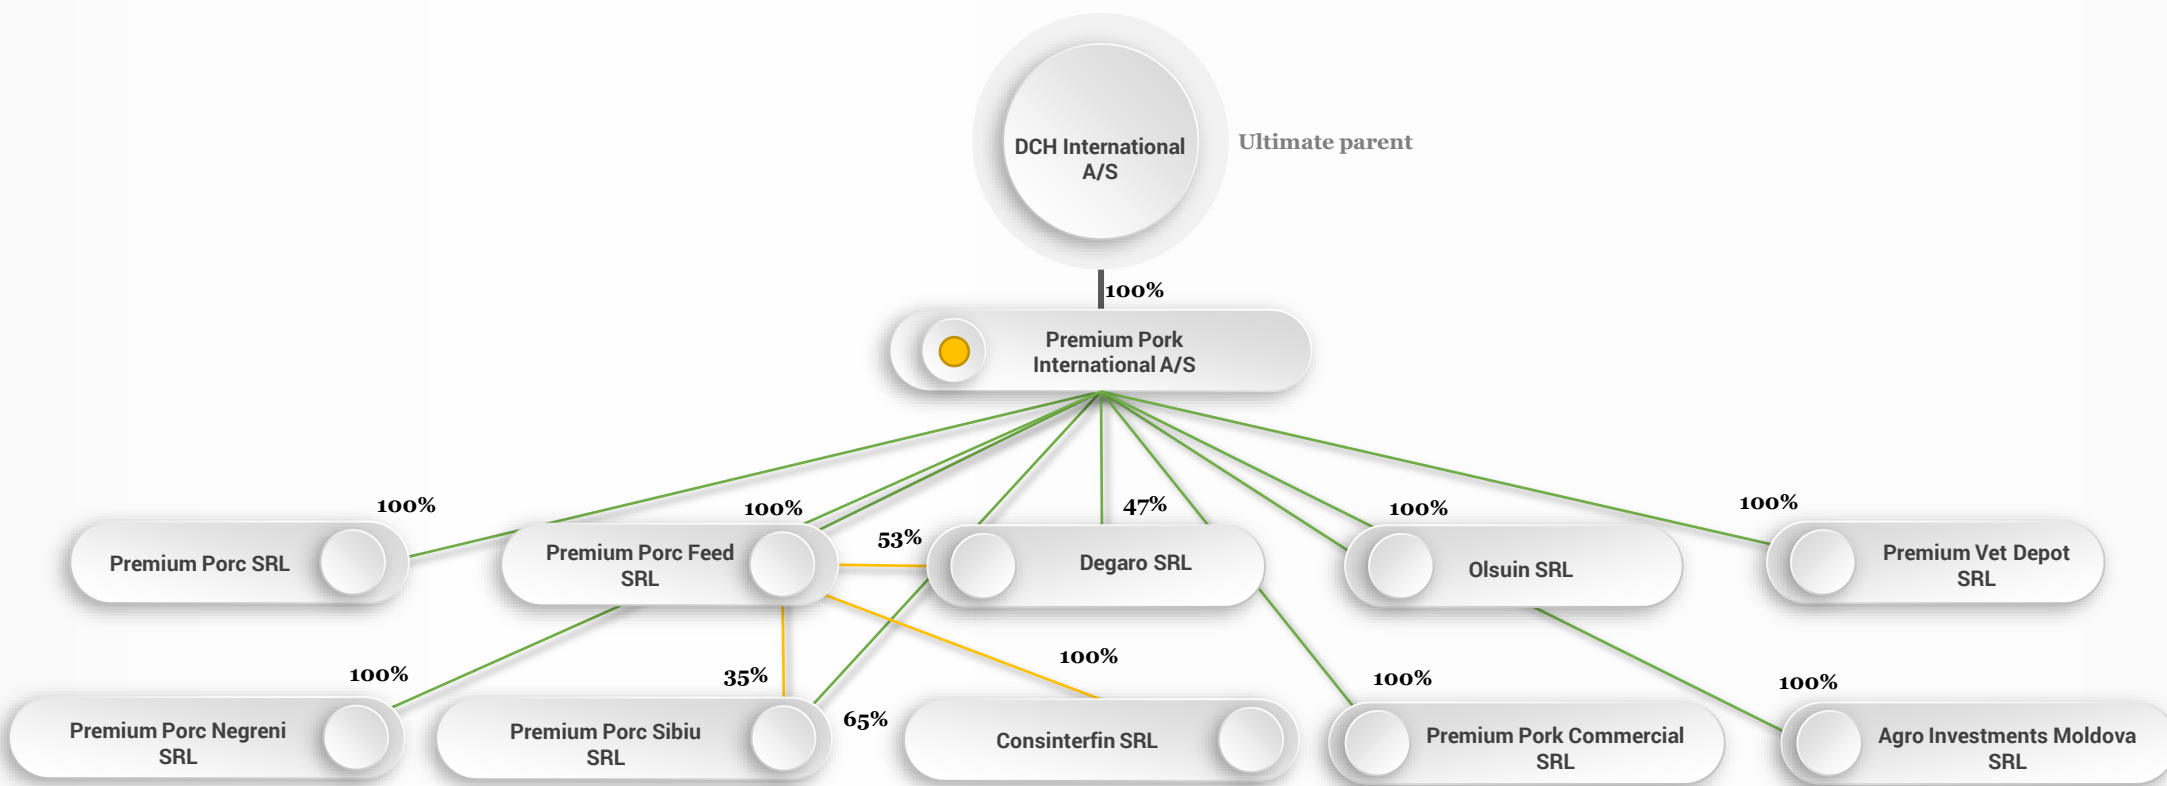

Our business model

- ✓ Integrated pig production: breeding, reproduction, maternity, finishers
- ✓ The best Danish genetics and technology
- ✓ Internal logistics for animals and feed
- ✓ Own Feed Mills
- ✓ Agriculture division
- ✓ Management of natural fertilizer

Corporate Structure

(As is from December 31st, 2020)

Note: All subsidiaries are 100% controlled and are all 100% owned directly or indirectly by DCH International A/S.

Development in the financial year and financial positions

2020 was a year of challenges and unusual market conditions

The year show a loss after tax on EUR -8.7m against EUR 14.8m profit in 2019. 2020 represents the first loss since the company was established in Romania more than 12 years ago whereas 2019 represents the highest profit in the Group's history. The consolidated total income was EUR 66.6m in 2020 (-27% compared to 2019). A negative fair value adjustment of herds on EUR 10.7m in 2020, compared to a positive adjustment on EUR 10.4m in 2019, explains 85% of the reduction in total income on EUR 25.0m.

Besides herd valuation, reduced production due to African Swine Fever (ASF) and lower pig prices had a significant negative impact in 2020. EBITDA adjusted for fair value adjustment and special items dropped 31% to EUR 14.3m in 2020 compared to EUR 20.7m in 2019.

The average sales prices decreased by 7 % from 1.63 to 1.52 EUR per kg. And the feed prices increased by 3%. The combined impact was a reduction in the overall profitability with EUR 5m.

On top of this, the production volume was reduced by 4% compared to 2019 caused by Olsuin farm being closed in January due to ASF. Repopulation of the farm is with good results accomplished by end of 2020. New ASF outbreaks in two other farms were confirmed in January 2021 with a negative impact on EUR 1.8m in 2020.

Due to the loss in 2020, the equity decreased 4% compared to 2019 but still amounts to EUR 88,2m and a very solid solvency ratio on 53%. Net interest-bearing debt (NIBD) was reduced 14% to EUR 48.5m despite the loss. Also, the Group's liquidity reserves are, as per 31/12 2020, at a high level.

Three main drivers explaining 2020 performance:

- **The average pork prices were 7% lower compared to 2019** accounting to EUR 4m lower turnover compared to if 2019 prices was repeated. The lower prices also had a big impact on the herd prices at year-end causing a negative herd fair value adjustment of EUR -10.7m (2019: EUR +10.4m).
- **Direct loses due to ASF** as the new Olsuin farm got infected at the end of 2019 and Premium Porc end of 2020. The negative financial impact due to the Olsuin outbreak is estimated to €2.5m in 2020 and the impact in 2020 due to the outbreak in Premium Porc is limited to EUR 1.8m.
- **Indirect losses due to ASF-zonings:** The high number of ASF outbreaks in Romania, especially among backyard pig population, continued to severely disrupt our production flows as well as our sales channels. The main impact is the additional costs generated by indirect losses due to ASF-related restrictions, accounting for a total loss of EUR 4m before tax in 2020.

| | Consolidated total | | Pig production | | Crop Production | |
|--|--------------------|---------------|----------------|---------------|-----------------|------------|
| | 2020 | 2019 | 2020 | 2019 | 2020 | 2019 |
| <i>EUR '000</i> | | | | | | |
| Total income | 66.574 | 91.591 | 64.926 | 89.943 | 1.739 | 1.625 |
| <i>Total income without fair value adjust. biological assets</i> | 77.224 | 81.217 | 75.693 | 79.527 | 1.623 | 1.668 |
| EBITDA | 1.449 | 28.866 | 545 | 28.135 | 535 | 902 |
| <i>EBITDA excl. fair value adjust. biological assets and excl. Special</i> | 14.314 | 20.687 | 13.526 | 19.913 | 419 | 945 |
| EBIT | -7.106 | 21.053 | -7.462 | 20.671 | 4 | 580 |
| Profit before tax | -10.335 | 17.596 | -11.038 | 16.929 | -159 | 385 |

Overall, the Group manages two business areas in Romania from which pig production is significantly the largest.

Covid-19 and ASF in Germany disrupted the positive price trend

Pork prices started record high and ended low

Pork prices started 2020 on a very high level and remained on a high level in Q1. As China's pig production was severely affected by ASF in 2019, the shortage of pork supply has triggered an unprecedented demand, positively impacting pork prices at a global level.

The prices were expected to remain high throughout 2020 but Covid-19 changed the market conditions and prices dropped more than 20% from Q1 to Q2. Despite less restrictions in H2, the long-term impact on demand due to Covid-19 restrictions remained severe and added pressure on the prices throughout the year.

The discovery of ASF in wild pigs in Germany in September added additional market pressure and additional negative impact on prices. Germany lost market access to most markets outside EU including the important Chinese market adding to the quantities to be consumed in EU.

The combined impact was a price reduction on 35% from start to end of 2020.

The pork market in 2020 can be summarized by three factors:

- The high demand from China continues but global prices were driven lower by increased supplies from US and other producers outside EU
- Reduced demand as a result of the Covid-19 pandemic (restaurants closed, outdoor activities and traveling restricted, changes in consumer behavior, slaughterhouses closed etc.).
- Due to Germany's export ban the supplies to be consumed in EU increased.

Tendency of pork and feed prices in Romania

| | 2016 | 2017 | 2018 | 2019 | 2020 |
|-------------------------------------|------|------|------|------|------|
| Pork Prices (carcass) EUR/kg | 1,38 | 1,66 | 1,42 | 1,63 | 1,52 |
| Feed Prices EUR/kg | 0,20 | 0,21 | 0,22 | 0,23 | 0,24 |
| Exchange ratio pork:feed | 6,8 | 7,9 | 6,5 | 7,1 | 6,4 |

Note: The table show realized prices from the subsidiaries in Romania as an annual average.

Feed prices increased

Until harvest 2020, feed prices had been relatively stable for a few years. Increased cereal prices globally from summer 2020 was further exacerbated by drought in Romania, severely reducing yields at national level. As a result, cereal prices registered a considerable increase from the beginning of the harvesting period. The average price of raw materials purchased in H2 2020 is 15-20% higher as compared to same period in 2019.

The fluctuations in commodity prices underline the industry's high exposure to the global price ratio of meat and cereals.

The price ratio between pork and feed dropped to 6.4 for 2020 despite a good start (7.3 in H1). The price ratio for 2020 ended as low as 2018, significantly lower than the long-term average. The lower ratio represents a reduced profit before tax of EUR 5.0m in 2020 compared to the same production with 2019 prices.

Herd valuation reduced by EUR 10.7m due to the reduced pig prices

The market prices of biological assets, primarily the pig herd, have followed the fluctuations in the pork prices reaching low prices at the end of the year. Consequently, the value of biological assets are reduced by EUR 10.7m compared to the equivalent, if prices of 31.12.2019 were to be used. The unit values is now at similar level as prices end of 2018.

The adjustment is in line with international accounting principles, which are considered to provide a more accurate description of the company's activities and financial position.

Pork prices expected to improve in 2021

The strong global demand continue, and it can be expected that prices will return to a higher level for the upcoming period, as the current global protein production seems unable to fully cover the high supply gap.

Production reduced in 2020 due to ASF

Facts about the pig production

| | | 2017 | 2018 | 2019 | 2020 | Diff. Y20 over Y19 |
|--|-------|---------|---------|---------|---------|--------------------|
| Number of sows end of year | heads | 12.510 | 17.427 | 17.744 | 17.956 | 1% |
| <i>Out of whichs sows to be cullec</i> | heads | 0 | 0 | 5.557 | 3.203 | |
| Weaned piglets per avg. sow | heads | 34,2 | 34,1 | 34,6 | 34,3 | -1% |
| Produced pigs per avg. sow *) | heads | 32,5 | 32,3 | 32,4 | 30,6 | -6% |
| Sold slaughterpigs | heads | 396.445 | 393.712 | 441.030 | 423.981 | -4% |
| Sold weaners (net) | heads | 6.900 | 59.096 | 102.871 | -3.457 | N/A |
| Produced pigs total | heads | 406.702 | 511.111 | 568.385 | 427.887 | -25% |
| Weight produced pigs | tons | 44.593 | 48.779 | 53.936 | 51.689 | -4% |

*) **Note:** Produced pigs per sow for 2017 & 2018 are excluding the BraSib expansion and in 2020 excl. restart of Olsuin.

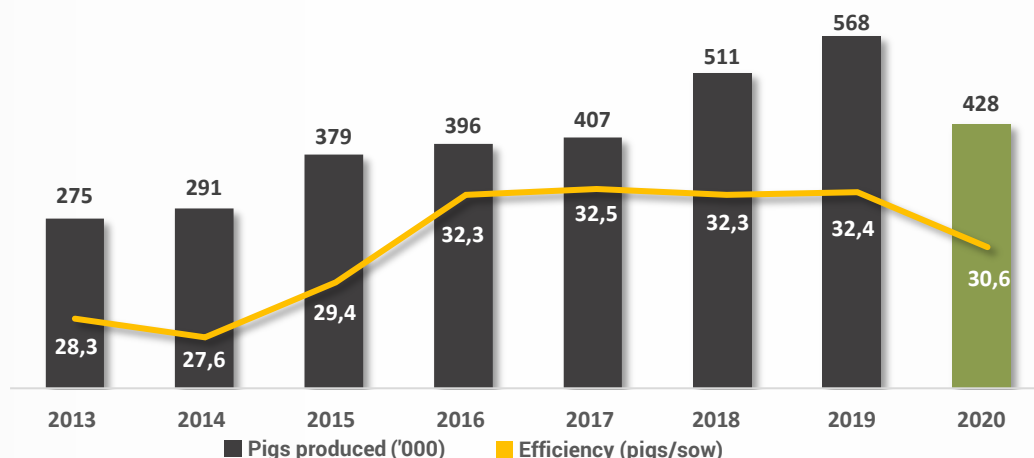

Pig production decreased by 4% in weight and 25% in number of pigs

2020 was the first year in the company's history with production numbers being lower than the previous year. The reason obviously being the ASF outbreak in Olsuin farm temporarily closing 30% of our production of piglets.

The annual production will again reach close to 600,000 produced pigs when ASF again allows full utilization of our production capacities. Unfortunately, this won't be the case in 2021 either due to the ASF outbreak in Premium Porc temporarily reducing our breeding capacity with 20%. More information of the consequences of ASF on the next page.

Productivity, measured in weaned pigs/sow per year, was maintained relatively on the same level as in the previous years for the three sow farms in full production. The production efficiency was negatively impacted by production flow disturbances generated by ASF zoning, with animal movement restrictions (blocked farms, reconfigured flows etc.).

Production development

Romania supports pig welfare

We have applied for and received grants to improve animal welfare in pig production, based on the Romanian support scheme. The grant we applied for in the year has been recognized in total income of EUR 6.2m. This represents 95% of the total amount applied for. Payment is expected during 1st half of 2021.

In 2020 we have received payments of EUR 8.1m for animal welfare support, for which we applied for in 2019. This represents EUR 1.6m more than allocated by the end of 2019. In total, payments for welfare subsidies of EUR 8.0m are booked in 2019.

The subsidy amount is far from a net gain, as we could reduce the significant costs related to meeting the requirements for the subsidy in case it ceases to exist. In addition, if there were no subsidies, it would be expected to reflect positively on the local pork prices.

Due to a significant reduction in the support scheme per unit, the total booked grants were gradually reduced since 2017, despite the increased number of sold finishers.

Production affected by African Swine Fever (ASF) in Romania

ASF evolution in Romania

Nationwide the ASF outbreaks were widespread and numerous again in 2020, though registered outbreaks in 2020 were almost half compared to 2019. Since the beginning of June 2018 more than 4.000 outbreaks are registered at national level and the entire country is now considered affected.

In 2020, zonings caused by ASF outbreaks in areas close to our farms continued impacting our production flows negatively, due to restrictions on moving animals out of the blocked farm. 6 of our owned farms as well as several of our rented farms were included in one or more zonings. The zonings lasted from 4 weeks up to 12 weeks. We work, in close collaboration with the authorities, toward lifting the zonings as soon as procedures allow. We are often able to continue the production unaffected in the blocked farms, if the zonings are lifted in 4-6 weeks, due to the measures we have taken to adjust our production flow.

ASF outbreaks in our farms

After the ASF infection in late 2019 Olsuin herd was culled in January 2020, the farm cleaned and disinfected in H1 and repopulated during H2 2020. The first slaughter pigs originating from Olsuin piglets were slaughtered in January 2021 and the farm is now back in full production.

In December 2020, Premium Porc farm was infected with ASF. Consequently, all 31,000 pigs were culled (out of which 3.000 sows). The comprehensive cleaning and disinfection phase has started. We expect the repopulation of the sow herd to start in October 2021. Meanwhile, finisher capacity in the farm will be used, why first pigs are slaughtered in Q4 2021. The farm will be back in full production from September 2022.

Dreadfully, the ASF infection in Venturelli farm followed in January 2021. This farm is a wean to finish operation and all 29,000 pigs were culled. The cleaning and disinfection phase has started. The repopulation of Venturelli farm is simpler compared to Premium Porc and Olsuin farms, as piglets are reintroduced immediately when the farm is available. We expect the first pigs to be slaughtered in September 2021.

The root cause for the infections is not identified in neither Premium Porc nor Venturelli. The two outbreaks are considered two independent cases as there were no contact between Premium Porc and Venturelli farm, that could transfer the infection. And both farms have a high level of biosecurity.

Direct losses caused by our ASF outbreaks

Culling of the pigs due to ASF is based on an order from the Romanian National Veterinarian authorities and the herd value is compensated by the state at market price. The expected compensation for the Olsuin herd was received in 2020. In this case, a small part of the business interruption was compensated through insurance. This is not the case for neither Premium Porc nor Venturelli farms.

After deducting the compensations from the state as well as from insurance the net loss for the Group caused by the Olsuin outbreak still amount to EUR 3.5m up to end of 2020 out of which EUR 1.0m was registered already in 2019.

The net loss registered in 2020 for the outbreak in Premium Porc is EUR 1.8m considering the agreed compensation from the state. As Venturelli was infected later no loss for this outbreak is registered in 2020. 2021 will be significantly affected by both outbreaks. The missing production in Premium Porc will have an obvious negative impact, but an even bigger impact is caused by business interruption in the other farms normally being connected in their production flow with one of the two farms.

Total losses in 2020 due to ASF

On top of the direct losses due to the outbreaks in Olsuin and Premium Porc, the accumulated losses registered in our Group, caused by ASF in Romania, add up to €4m in 2020. Losses added up to approx. €9m in 2019 and €5.2m in the 6 months with ASF in 2018.

The indirect losses caused by the restrictions due to ASF outbreaks is not compensated by the authorities. These indirect losses can be split in the following components:

1. Lower sale prices due to special handling of pigs from ASF areas and, in many cases, thermal treatment of the pigs from restriction zones;
2. Lost production in finishers farms not being supplied with weaners due to surveillance/protection zones;
3. Special items: Extra costs to compensate for disrupted production flows. This category includes extra feed, rental of additional barns, extra work and a variety of additional costs for veterinarians, consultants etc.

Our priority to protect our farms within the Group remains. This by adhering to our established biosecurity measures and strengthening these by investing continuously.

Crop Production and Investments

Agro production affected by severe drought in Romania

The crop yields were less than half of normal due to a very warm and dry season. The seeding of crops in the autumn 2019 was challenging and rape was not seeded. Despite wheat and barley initial being well established, a cold winter and dry conditions reduced the number of hectares being harvested. Spring crops was even more affected. In total we only harvested 80% of the seeded area due to drought.

The established crops in the autumn 2020 looks good and support a positive outlook for the 2021 harvest.

The produced cereals represent less than 5% of the total raw materials needed for the group's feed production, the remaining being sourced from both local as well as international producers. We are continuously evaluating the crop division's strategic position in our group.

EUR 0.2m profit from sales of farmland

The sale of farmland not used by us continued in 2020. The positive impact on EUR 0.2m from this activity could not prevent the total field activities to perform a loss.

Feldioara lagoons

EUR 7.8 mil. invested in 2020

Overall, the investments in 2020 reached EUR 7.8m excluding the breeding herd.

Improvements on Feldioara finisher farm

We finalized first phase of the Feldioara project including new lagoons, corridors and other renovations at the Feldioara farm purchased in 2018. EUR 1.7m were spent on this project in 2020. The second phase of the project, transforming the farm to a wean-to-finish operation were postponed.

Biosecurity investments continue

As a key element in operating in the ASF environment, we have continued our investments in biosecurity, amounting to approx. EUR 1.2m representing another significant share of the total investments in 2020. These investments were partial covered by grants.

Properties revalued by EUR 5.2m

A valuation review has been performed on the properties owned by the subsidiaries Premium Porc Sibiu SRL, Degaro SRL, Olsuin SRL and Premium Porc Feed SRL. The valuation reviews are the basis for property tax payments and have resulted in a total financial revaluation of EUR 5.2m. The revaluation after tax is allocated to other comprehensive income included in the equity and has no impact on the result for the year.

Litigations overview

Litigations for repayment of grants

The pending cases of claims for recovery of various grants with a total of EUR 1,6m have been reduced from three cases to one since the two minor cases have been ruled in favor of the company after two court rulings. The larger dispute has been appointed to a higher court from the start and was addressed starting with December 2015. An unfavorable ruling for the company was given in February 2016. The court decision was appealed to High Court. The High Court decided in our favor in January 2019 to return the case for retrial at the first court. We won the retrial in May 2019, but this time the authorities appealed to High Court and a new trial date is set for 2021.

Our Romanian lawyers and legal advisors assessed that we still have a good legal position. For that reason, we have chosen not to expense the amount. During 2017 we did pay the amount to the tax authorities, in order to avoid pledge on the tangible assets, although we consider the amount paid as a receivable.

We consider the case as an isolated event without influence on subsidies received after 2012.

Litigations for relocation of Negreni farm

A group of citizens in Negreni village brought charges in 2016 claiming our farm should be relocated. Their claim is based on a Government Order from 2014 stipulating that distances from farm operations to the neighboring houses should be minimum 1,500m.

Our advisors, as well as the authorities that have assessed and validated our production and building permits, agree that this Order was meant to cover future constructions only and not farms and houses established decades before the Order was issued. Despite this, we lost in two consecutive local court hearings in 2018 and we are demanded to relocate the farm. The Ministry issuing the Order has in 2019 confirmed our understanding. The case is contradicting in many ways with the legal framework covering our production permits. The enforceability of the verdict is anyhow seen as practically impossible as all production permits are valid, and the production can continue despite the verdict.

In addition to the three new similar claims received in 2019, twelve more were received in 2020. All of the claims are set for trial in spring 2021.

We have no intentions for relocating the farm and continue disputing the ruling. The management and our legal advisors have initiated several actions for annulment and estimate that we have a strong case for overturning the motion. Based on this, we have chosen not to make any provisions as we don't expect to encounter any losses due to this case. The case is described in detail in Note 2

Covid-19 pandemic

Covid-19 – the unexpected game changer

In 2020, the Covid-19 pandemic unexpectedly unfolded impacting lives and businesses globally. We were no exception to the impact of Covid-19, as we suddenly were faced with new situations that required our attention and adaption. At the very center of decisions taken was the goal to protect our employees and their families as well as ensuring business continuity.

Internal measures implemented to fight the pandemic

Seeking to establish internal measures, to ensure our employee’s health and limit the impact of Covid-19 on our business, a support committee was established representing our departments broadly. We started off by building our employees’ awareness about Covid-19 aiming to stop the spread – in line with national governmental guidelines.

We implemented several hygienic and precautionary measures, such as usage of masks, gloves and disinfectants, to mention a few. Adhering to distancing became a must, why face-to-face meetings were replaced with online meetings as well as internal events were cancelled. A shift working schedule was established for our production employees to avoid contact between them and the administrative employees started working from home.

Added pressure on the organization

Covid-19 added extra pressure on our entire organization both privately and professionally. Privately, as many of our colleagues had children at home to care for, due to school closure, while balancing work responsibilities. Professionally, as a shift working schedule was implemented in our production stretching our resources and the lack of physical attendance in offices and meetings, thus resulting in more misalignment, errors and conflicts than usual.

Despite the uncertainty and change caused by the pandemic, our employees have embraced the challenges and demonstrated collaboration, persistence and dedication in protecting each other and our business. This only underlines the strength and passion of our 500 employees within the Group.

Donations to our communities

Supporting our communities has always been our motivation and not at least during the pandemic. We donated medical supplies to hospitals, such as oxygen concentrators, masks and overalls. In addition, basic food packages and hygienic items were donated to more than 2.000 people in our communities.

Organizational development in a Covid-19 context

We continued developing our employees and build their expertise despite challenged by the distancing measure adopted due to the pandemic. We moved training online and yet managed to deliver more than 1.100 hours of training to employees from various departments and organizational levels. We see the investment in training and educating our employees as steps towards continuously improving the efficiency in our operations alongside our business results.

Additional focus was placed on strengthening the role of middle management level in our organization, aiming to building the foundation for them to increase team performance for continuous corporate growth.

Corporate Social Responsibility

We care - Responsibility and sustainability as our guiding principles

This statement has been prepared in accordance with the Statement Acts §99a and §99b.

Our CSR strategy reflects the emphasis we, DCH International A/S, put on our operations being responsible and sustainable, and is built upon the pillars of animal welfare, environment, human and labor rights, local communities, corporate governance and anti-corruption. Our CSR report is public and can be read in full at our company's website: www.premiumporc.com

Animal welfare

Environment Protection

Local communities

Care for employees

We put much effort in reducing the environmental impact of manure from our production. This by applying the manure as natural fertilizer in various ways and, at the same time, exploring new means to use it. To prevent release of greenhouse gasses, and reduce odors in general, the manure is stored in sealed lagoons.

Seeking to develop and support the local communities in which we operate, we have formed sponsorships with local schools and hospitals in Romania. Here, we focus our initiatives on the pillars of education, health, environment and local values.

We aim for the highest standard of animal welfare within our industry by complying to established procedures for pig production as well as biosecurity. These procedures are based on Danish practice, EU standards and further supplemented by the additional measures required by the Romanian national program for animal welfare.

Our guiding principles of sustainability and responsibility is reflected in our continuous drive to minimize the impact of our business, and by providing improvements today and for generations to come.

Policy for the under-represented gender

Board of Directors:

The current gender balance in the board is: 1 woman and 4 men. The target regarding diversity at Board of Directors level was that at least one of the board members should be of the under-represented gender.

The company's board members are elected by the shareholders at the Annual General Meeting. Taking the specifics of the industry into account, it is unlikely that the proportion of the under-represented gender in the board will increase further over the coming years. The shareholders will be aware of this in the future constitutions of the Board, if the recruitment base supports this possibility, in order to ensure diversity in management to strengthen the innovation capacity and quality of the management.

Other management levels:

Due to the limited number of employees in Denmark, the company is not required to establish a policy for other management levels. Nevertheless, through its internal policies and practices, the group assures a fair selection process, open towards all genders as well as personal circumstances, and the selection is performed strictly on criteria related to expertise and reflection of company values.

Anticipated development

Pork prices expected to improve

Three factors, demand from China, ASF development in Europe and Covid-19, make the predictions for the development of the European market for pork difficult. The production in EU is adjusted to the changed demand structure caused by Covid-19 and the lack of export from Germany caused by ASF. With the EU market structure stabilized the undersupply of pork on the global market, mainly driven by the severe impact of ASF in China, will maintain a strong support for the demand and the prices.

The pork market is expected to improve based on China's continuous strong demand and the prices are expected in 2021 to reach minimum a 5-year average level. Although a worst-case scenario can lead to lower pork prices than expected, we do see the upsides as being more likely, especially driven by Covid-19 restrictions lifted shifting demand towards a more normal situation.

Subsidies for animal welfare continue

The current program for improving animal welfare was originally supposed to stop by end of 2020 but was extended to cover 2021 as well on same conditions and financial level as the previous year. Even if the current program will be reduced in financial value from 2022, we still see it as an important factor for the future development of the industry in Romania as well as for the Group.

Production focused on having all farms back in operation

Despite Olsuin farm being fully repopulated by end of 2020 the production will still be affected until the efficiency during 2021 is returned to what is expected of a mature herd.

Due to the ASF outbreak in Premium Porc, and culling of the entire herd in January 2021, our total production will be approx. 100,000 pigs (17%) reduced in 2021. We plan to repopulate the farm in H2 2021 and having the herd gradually rebuilt, reaching full production in during Q3 2022.

The ASF outbreak in Venturelli will not reduce the number of pigs produced but will reduce the output of weight due to the lack of barn capacities for approx. 6 months. This farm is expected to return back to normal production flow in Q3 2021.

In terms of profitability, the decrease in production will - like in 2020 - be partly offset by higher selling weight and reduced sales of weaners.

ASF will be present in Romania for several years to come

As ASF continues to evolve in Romania, we expect production flow disruptions caused by farms entering protection/surveillance zones, although hopefully at a lower level than 2020. In production and financial planning, we have included a reserve to cover the negative impact caused by such situations.

It's of a high importance for our industry that the ASF situation is being controlled. We support the actions of the authorities and the need to maintain the restrictions for a longer period. Improvement can be seen in the manner that local authorities manage the clearance of ASF outbreaks, leading to gradually decreasing periods of animal movement restrictions. On the other hand, on national level, it is less likely that authorities will manage to gain control over the evolution of ASF and implement a unitary disease combat strategy.

We do expect that ASF will be present in Romania for several years to come, but as backyard production is naturally decreasing, further accelerated by ASF, the risk is eventually expected to gradually decrease within the following years.

Few investments planned for 2021

Considering the ASF situation, and the focus on having all farms back in production, investments projects are limited and will only be implemented based on a high degree of necessity.

We expect a small net profit for 2021

As stated above, we believe pork prices will increase in 2021 compensating partial for many of the ASF challenges described.

Measured on EBITDA adjusted for fair value adjustment we expect to reach approx. EUR 8-11m compared to EUR 14.4m in 2020. Herd valuation is expected to have a positive impact in 2021 and will most likely be determining the size of the net profit.

This estimate is subject to more uncertainty than usual due to the volatile market conditions.

Note 1: Summary of significant accounting policies and estimates

Significant accounting estimates and assessments in the group accounting policies

Revaluation of fair value of property, plant and equipment

The Group's land, buildings, plant and machinery are revaluated at fair value. Revaluation of property, plant and equipment is recognized in fair value using either a market-based approach or a replacement cost approach. Results of the revaluation based on the replacement cost approach were compared with a revaluation performed using the income approach to check for impairment indicators of revalued assets, if any.

The revaluation process is based on qualified independent appraisers done according with International Valuation Standard 300. This standard considers as basis for evaluation IAS36 and IFRS13. Valuation techniques are the market and replacement cost approach.

The replacement cost approach is only used in cases where there was no possibility to use the market approach. The valuation process and results for measurement are reviewed and approved by the Group's Management and by the Audit Committee at least once every year.

In the subsidiaries, revaluations are performed every third year to ensure the carrying amounts do not differ materially

from that which would be determined using fair value at the end of the reporting period. This procedure has been used for many years with only very limited value adjustments registered. This year one of the entities performed a valuation.

The total fair value of land, buildings, plant and machinery amounted to EUR 97.2 million at December 31st, 2020 (EUR 91.1 million at December 31st, 2019).

Fair value of biological assets

Biological assets are recognized when the Group controls the assets and it is probable that future economic benefits associated with the asset will flow to the Group and the cost for fair value of the asset can be measured reliably.

Biological assets are measured at fair value less selling costs.

Value adjustments of biological assets are recognized in profit or loss for the period of which they relate.

Commercial herd:

Slaughter pigs (Finishers) above 50 kg are valued based on average sales prices for November-December on the local market less costs for reaching desired sales weight on approx. 112 kg. Finishers between 25-50 kg are valued as weaners with additions for added weight.

The fair value of weaners is based on official Danish and German quotes plus a mark-up to reflect the Romanian market conditions. The Danish and German quotes are used as there isn't an official quotation for the Romanian market. The Group's experience from historical sales as well as purchases is that prices on the Romanian market are strongly correlated to the German and Danish quotations plus a mark-up reflecting the lack of weaners for sale in Romania. The mark-up is according to the Group's recent weaner sales contracts.

The valuation of piglets is based on official Danish quotes.

Breeding herd:

Breeding herd (boars, sows and young females) are valued based on official quotes, based on criteria such as genetics, costs and expected piglets.

WIP Crops:

For crops sown in the autumn, the Group estimates that there was no material biological transformation at Year-end compared with the time of sowing, and therefore these biological assets are measured at cost, which corresponds to the fair value.

Note 2: Contingent liabilities

Repayment claim Premium Porc SRL: ("APIA case")

The Ministry of Agriculture in Romania raised in 2014 a claim for repayment of EUR 1,592k against the subsidiary company Premium Porc SRL. The repayment claim is EUR 1,337k after tax. This claim is based on an error in the application for diesel subsidy for 2011. An error which was detected and corrected in 2012.

Premium Porc SRL appealed in 2014 against the claims and prevailed in respect of 2 out of 3 cases. The last of the 3 cases is in beginning of February 2016 lost in first court and afterwards appealed as the company's management and legal advisors assess that the repayment claim is invalid, and the company are expected to win the appeal. In January 2019 the High Court annulled the sentence from February 2016 and returned the case back for retrial. We won the retrial in May 2019 as the first court ruled in our favor, but the authorities appealed to the High Court. The first term is set for Q2 2021.

Based on the management and the company's legal advisor's opinion that the repayment claim is invalid, no provisions for repayment of subsidies are stated in the income statements. The amount is paid to the authorities in 2017 and is part of other receivables since year end 2017.

Relocation of Negreni farm: (Negreni neighbor cases):

Five citizens from Negreni village filed, in November 2016, a claim against Premium Porc Negreni SRL with the objective of relocating the Negreni-farm as well as receiving compensation for moral damages. Their claim is based on Government Order no. 119/2014 stipulating that distances

from farm operations to the neighboring houses should be minimum 1,500m. The Negreni farm, build in 1981, is currently located at few hundred meters from the nearest houses, all of them being built after the farm.

In first court, in March 2018, the judge ruled that the farm should be relocated in order to respect the mandatory distance provided by Order 119 and denied the claimants compensation for moral damages. Premium Porc Negreni SRL appealed the ruling in June 2018. In second court, in December 2018, the Mehedinti Tribunal rejected our appeal and upheld the decision from the first court.

Two means of extraordinary appeals were both denied by the court (the same court who decided the initial ruling). A formal complaint against the judge, referring to misconduct of the case and unjustified dismissal of evidence, was also dismissed by the administrative procedure.

The Government's objective, in 2014 when Order 119 was issued, was to prevent construction of new farms within less than 1,500 m from private houses for the future. And vice versa. This understanding of the Government's Order also is confirmed by all authorities and is reflected in the fact that all production and functioning permits are regularly renewed despite the distance being less than 1,500 m.

To further substantiate our understanding of the Order we've recently received a response from the Ministry of Health confirming that our understanding is correct.

As a secondary measure we filed in October 2018 a request for annulment of Order No. 119/2014. The court dismissed our claim in June 2019. We have appealed to High Court, as we believe we have good grounds to obtain the annulment of this Order, which could re-open the lost case.

Unfortunately, this has a long-time horizon as trial is set for 2022.

Fighting enforcement procedures is ongoing. Court decisions have until now mainly dealt with technicalities and penalty claims. No definitive results yet. Court hearings continues in 2021.

We have since September 2019 up to now received, twelve new similar claims from other citizens with connections to the original claimants as well as three new claims from one of the original claimant and his wife. Also, a new claim from the son of one of the original claimant was received in November 2019, having as object, to meet the distance between his house and the lagoons. All of the claims are set for trial in spring 2021.

The current ruling for relocation doesn't cancel our permits and the production continues undisturbed. According to our legal advisors, since the ruling is to "move" the farm and not to close it, it will be difficult or impossible for the claimants to stop our production in the farm. Relocation of the farm is impossible to carry out in practice and calculation of the potential worst-case loss is impossible to assess with a reasonable certainty. The potential worst-case loss caused by the unlikely outcome that the farm will have to be closed and removed is substantial.

Based on the management and the company's legal advisor's opinion that the relocation ruling is invalid and will be annulled eventually, no provisions for relocation of the farm nor other provisions are stated in the financial statements.

Revaluation of fair value of property, plant and equipment

The Group's land and buildings and plant and machinery are revalued at fair value as described in note 1. The revaluation process is based on qualified independent appraisers, and valuation techniques are the market and replacement cost approach. The replacement cost approach is only used in cases where there was no possibility to use the market approach.

Revaluations are in the subsidiaries carried out every third year to ensure the carrying amounts does not differ materially from that which would be determined using fair value at the end of the reporting period. A valuation review has been performed in 2020 on the properties owned by Premium Porc Feed SRL, Degaro SRL, Olsuin SRL and Premium Porc Sibiu SRL (2019: Premium Porc SRL and Premium Porc Negreni SRL). The valuation reviews resulted in a total financial revaluation of EUR 5.2m. (2019: EUR 1.1m).

| <i>EUR '000</i> | Land and buildings | Plant and Machinery | Operating equipment | Property, plant and equipment in progress |
|--------------------------------------|--------------------|---------------------|---------------------|---|
| Cost at January 1, 2020 | 77.660 | 40.666 | 7.492 | 3.659 |
| Additions for the year | 4.650 | 4.076 | 761 | 4.177 |
| Disposals for the year | -419 | -13 | -1.311 | -4.828 |
| Cost at December 31, 2020 | 81.891 | 44.730 | 6.943 | 3.008 |
| Appraisal at January 1, 2020 | 10.408 | 0 | 0 | 0 |
| Appraisal increases | 5.174 | 0 | 0 | 0 |
| Appraisal increases at Dec. 31, 2020 | 15.582 | 0 | 0 | 0 |
| Amortisation at January 1, 2020 | 17.974 | 19.643 | 4.241 | 0 |
| Amortisation for the year | 3.896 | 3.861 | 890 | 0 |
| Reversed depreciation on disposal | -352 | -85 | -1.071 | 0 |
| Amortisation at December 31, 2020 | 21.518 | 23.419 | 4.061 | 0 |
| Carrying amount at Dec. 31, 2020 | 75.955 | 21.311 | 2.882 | 3.008 |
| Land which is not depreciated | 5.533 | | | |
| Right of use assets | 179 | 1.439 | 1.852 | 0 |
| Assets provided as security for debt | 74.855 | 21.311 | 2.882 | 0 |

If Land and buildings were measured using cost model, the carrying amounts would be:

| | |
|---|--------|
| Net carrying amount Land and Buildings without revaluations, 2019 | 59.686 |
| Net carrying amount Land and Buildings without revaluations, 2020 | 60.373 |

The Group had end of 2020 contractual obligations related to Property, plant and equipment in progress on EUR 0.2m (2019: EUR 0.5m).

Note

14 Biological assets (continued)

Crop production - work in progress

| | 2020 | 2019 |
|---|--------------|--------------|
| Carrying amount at beginning | 432 | 509 |
| Gains/losses from fair value changes | 116 | -43 |
| Additions (field expenses) for the year | 1.152 | 1.287 |
| Disposals from harvesting | -1.172 | -1.309 |
| Exchange adjustments | -8 | -13 |
| Carrying amount at December 31 | 521 | 432 |
| <i>Total number of harvested hectares during year</i> | <i>1.323</i> | <i>1.663</i> |
| <i>Number of cultivated hectares end of year</i> | <i>830</i> | <i>887</i> |

Gain on changes in fair value comprises changes as a consequence of biological growth and price changes. Disposals from sales and transfer amounts are calculated using the fair value per unit from previous period. Transfers between groups' covers pigs transferred to own breeding as young females.

Reference is made to note 1 for further details of fair value measurement of biological assets.

Current biological assets under crop production include winter crops sown in the autumn. Field expenses for the year include expenses relating to biological transformation.

All biological assets are measured at fair value. All of these fair values are placed at level 3 in the fair value hierarchy as significant estimates are applied – please refer to note 1. The Groups financial department is responsible for performing the valuation of fair value measurements including level 3 fair values of biological assets. Valuation model includes market inputs from official prices and actual own sales prices on local market. The valuation process and results for measurement are reviewed and approved by Group Management and the Audit Committee at least once every year.

Note

22 Deferred Income

| | <i>EUR '000</i> | |
|---------------------------------------|-----------------|--------------|
| | 2020 | 2019 |
| Investments subsidies beginning | 1.654 | 1.874 |
| New investment subsidies received | 584 | 0 |
| Amortization of investments subsidies | -207 | -221 |
| | 2.031 | 1.654 |

Deferred income primarily relates to grants for the construction of feedmills in Romania. Grants are recognised as income concurrently with the underlying fixed assets being depreciated.

23 Other liabilities

| | | |
|---------------------------|--------------|--------------|
| Employee related payables | 323 | 450 |
| ASF outbreak provision | 2.060 | 2.115 |
| Other payables | 2.196 | 2.479 |
| | 4.579 | 5.044 |

Market Risk

Note 24: Financial risks

Market risk

The Group's credit facilities are floating-rate credits, which exposes the Group to interest rate fluctuations. According to Group policy, all financing of working capital and investments in fixed assets are made on floating-rate terms. An interest hedging of approx. 17 % of the debt (EUR 10.5m) has been concluded via the same banks providing the underlying long-term facility. The interest hedge fixes the interest to approx. 3.5% including margins for the next 4 years. The market values of the interest hedge, EUR 0.4m, is included in Other liabilities (note 23). Additional 3 % of the Group's debt is with fixed interest rate.

Activities abroad, earnings, cash flows and equity are not materially affected by currency risks, as the foreign activities are predominantly transacting in their functional currency (RON). Similarly, the external financing is denominated in EUR, which is the functional currency of the parent entity and the presentation currency for the Group, except for financing locally, which is in the functional currency of the subsidiary. Hence, there is no currency risks related to external financing either. Consequently, material currency risks for the Group are limited to translation risks related to foreign subsidiaries.

The Group does not engage in speculative currency positions. Introduction of the EUR as functional currency of the consolidated financial statements has contributed to reducing the overall impact of exchange rates.

Exchange rate adjustments of investments in foreign subsidiaries being independent entities are recognized in other comprehensive income. Exchange rate risks related to investments are normally not hedged, as the company's management is of the opinion that a current foreign currency hedging would not be the optimal solution with a view to the overall risk and costs.

The Group is exposed to interest rate risks, as loans are primarily with variable interests except for the smaller part with fixed interests described above. A reasonable possible change in interest rates at 31.12.2020 would not have any material effect on income statement or equity.

The Group is highly exposed to global and EU development in sales prices of pork as well as raw materials for feed (grain and protein). The most significant effect on the Group's earnings is attributable to changes in the price of pig meat and price changes relating to pig feed, which makes up 2/3 of the pig production costs. The Group observes these developments closely.

A change of the pig meat price of 10% will, on an isolated basis, affect profit for the year before tax by approximately EUR 5.9 million (2019: approx. EUR 6.8 million). A 10% change in the feed price will, on an isolated basis, affect profit for the year before tax by approximately EUR 3.5 million (2019: approx. EUR 3.5 million).

Split of total outstanding interest bearing debt

| | EUR '000 | | Interest binding period in months | Avg. effective interest |
|-------------------------------------|---------------|---------------|-----------------------------------|-------------------------|
| | 2019 | 2020 | | |
| Loans with fixed interest | | | | |
| EUR | 12.000 | 10.500 | 12-48 | 3-4% |
| RON | 2.089 | 1.400 | up to 36 | 0% |
| DKK | 997 | 766 | | 6,5% |
| | 15.086 | 12.666 | | |
| Loans with variable interest | | | | |
| EUR | 45.504 | 42.991 | 1-6 | 2-3% |
| RON | 5.957 | 5.315 | 1-6 | 2-3% |
| DKK | 460 | 0 | 1 | 4% |
| | 51.921 | 48.306 | | |

Other Financial Risks

Liquidity risk

The Group ensures adequate cash resources by entering into framework agreements in respect of current overdraft facilities. Existing agreements subject to time limitation are irrevocable on the part of the banks prior to maturity unless there is a breach of the terms of the loans according to the loan agreements.

Maturity analysis for debt is stated in Note 21, to which reference is made. The maturity analysis is disclosed according to category and class broken down on maturity period. All amounts are excluding future interest payments.

Capital management

The objective of the Group's capital management is to ensure the Group's ability to continue as a going concern in order to provide return on the shareholders' investments and establish and maintain an optimal capital structure for the purpose of reducing the costs of borrowed capital and maintain a basis for continued growth in the Group.

The Group's capital management is moreover partly controlled by loan agreements which include specific requirements to the financial performance of the Group.

Total capital comprises equity and subordinate loan capital from the Parent company; as shown in the consolidated balance sheet

Credit risk

The Group is exposed to credit risks on receivables. The Group positively wants to minimize its credit risks, which mainly relates to sales transactions. Credit insurance is taken out in advance on more than 90% of the normal sales of slaughter pigs. Due to changes in the sales (thermal treatment and weaner sales) caused by ASF trade restrictions the credit exposure was significantly increased in 2018 and has gradually improved since. Credit insurance covers approx. 80% of the total receivable end of 2020 (2019: 65%). Outstanding receivables are followed-up upon on a current basis in accordance with Group procedures.

The expected credit losses on trade receivables are estimated by reference to past default experience of the debtor and an analysis of the debtor's current financial position, adjusted for factors that are specific to the debtors and an assessment of both the current as well as the forecast direction of conditions at the reporting date. The Group writes off a trade receivable when there is information indicating that the debtor is in severe financial difficulty and there is no realistic prospect of recovery, e.g. when the debtor has been placed under liquidation or has entered into bankruptcy proceedings, or when the trade receivables are over two years past due, whichever occurs earlier.

There has been no change in the estimation techniques or significant assumptions made during the current reporting period.

| <i>EUR '000</i> | Due above 5 years | Due Between 2 and 5 years | Due within 1 year | Total Carrying amount |

| | 0 | 848 | 21.051 | 21.899 |

Notes to Consolidated Financial Statements

Note 25: Incentive program for group management

DCH International A/S has granted warrants to members of the Group's management, that will allow them to purchase a number of shares in DCH International A/S at a price agreed in advance.

A total of 2,904,000 warrants have been granted, of which 1,226,000 warrants have vested on December 31, 2020. The remaining 1,678,000 warrants will vest in installments up and until December 2023 if all the participants in the program remain employed. The participants may exercise their warrants by purchasing shares during a four-week period following the approval of the parent entity's annual report in the years 2023 to 2027, after which the warrants will lapse without any further notice. The agreed exercise price increases from 3.81 DKK per share in 2023 to 4.63 per share in 2027.

The fair value of each option is calculated using an option pricing model taking into account the exercise price of the option, an estimate of the current price of the underlying shares, the life of the option and the risk-free interest rate for the life of the option. As the Group is unlisted, and no market information for comparable listed entities are currently available, the current price of the underlying shares is determined based on the equity per share according to the annual report for 2019. Management believe that this is a reasonable approximation of the current market price for the Group's shares for the purpose of the measurement of the warrants, due to the current market situation and the outbreak of ASF in Romania, and the fact that all tangible assets and biological assets of the group are measured at fair value. In determining the life of the option for the purpose of the measurement, it is assumed that the employees will exercise the option as soon as possible.

The fair value of the warrants granted has been determined to be 0.47 DKK (0.06 EUR) per warrant. The most significant inputs used in the measurement model are the following:

| | |
|------------------------------------|-----------|
| Volatility | 25% |
| Exercise price (in the parent) | 4.63 DKK |
| Risk free interest rate (pro anno) | 0.0% |
| Life of the warrants | 84 months |

Note 26: Related parties and ownership

DCH International A/S's shareholders are legal and natural persons, and no individual shareholder exercises control of the Group's activities. The following shareholders are registered as holding more than 5% of the voting share capital or minimum 5% of the share capital:

FMB Holding A/S, Søvejen 33, 8752 Østbirk
Stenagergaard Invest ApS, Tellerupvej 15, 5591 Gelsted
Helge Maagaard, Ulf sundvej 25, Nees, 7660 Bækmarksbro
Tofthøj Agro A/S, Tofthøjvej 41, 7321 Gadbjerg

Transactions

Only related party transactions not conducted on an arm's length basis are disclosed in the annual report.

No such transactions have been conducted in the financial year.

27 Fees paid to auditors appointed by the General Assembly

| | | |
|---------------------------|------------|------------|
| Fees for statutory audits | 92 | 79 |
| Other Services | 69 | 72 |
| | 161 | 151 |

Audit fee are recognized as administrative costs

28 Post balance sheet events

There have been no significant post balance sheet events.

Accounting Policies

Note 29: Accounting Policies

Classification

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU and additional Danish disclosure requirements for annual reports.

Recognition and measurement

Assets are recognized in the balance sheet when it is probable as a result of a prior event that future economic benefits will flow to the Group, and the value of the assets can be measured reliably.

Liabilities are recognized in the balance sheet when the Group has a legal or constructive obligation as a result of a prior event, and it is probable that future economic benefits will flow out of the Group, and the value of the liabilities can be measured reliably.

On initial recognition, assets and liabilities are measured at cost. Measurement subsequent to initial recognition is effected as described below for each financial statement item.

Anticipated risks and losses that arise before the time of presentation of the annual report and that confirm or invalidate affairs and conditions existing at the balance sheet date are considered at recognition and measurement.

Income is recognized in the income statement when earned, whereas costs are recognized by the amounts attributable to this financial year.

Consolidated financial statement

The annual report include Premium Pork International A/S (Parent) and the enterprises (group enterprises) that are controlled by the Parent, see group chart on page 11. Control is achieved by the Parent, either directly or indirectly, holding more than 50% of the voting rights or in any other way possibly or actually exercising controlling influence.

Basis of consolidation

The annual report is prepared on the basis of the financial statements of Premium Pork International A/S and its subsidiaries. The annual report is prepared by combining uniform items. On consolidation, intra-group income and expenses, intra-group accounts and dividends as well as profits and losses on transactions between the consolidated enterprises are eliminated. The financial statements used for consolidation have been prepared applying the Group's accounting policies.

Subsidiaries' financial statement items are recognized in full in the annual report.

Investments in subsidiaries are offset at the pro rata share of such subsidiaries' net assets at the takeover date, with net assets having been calculated at fair value.

Business Combinations

Newly acquired or newly established enterprises are recognized in the annual report from the time of acquiring or establishing such enterprises. Divested or wound-up enterprises are recognized in the consolidated income statement up to the time of their divestment or winding-up.

The purchase method is applied at the acquisition of new enterprises, under which identifiable assets and liabilities of these enterprises are measured at fair value at the acquisition date. On acquisition of enterprises, provisions are made for costs relating to decided and published restructurings in the acquired enterprise. Allowance is made for the tax effect of restatements.

Identifiable intangible assets are recognized separately from goodwill if they are separable or arise from contractual or other legal rights.

Any remaining positive differences between cost and the fair value of assets, liabilities and contingent liabilities acquired are recognized in intangible assets in the balance sheet as goodwill. Goodwill is not amortized but is tested for impairment on an annual basis. Enterprises acquired are recognized in the consolidated financial statements as from the date of obtaining control, whereas enterprises sold are recognized up until the date of surrender of control. Intra-group acquisitions of subsidiaries are made under the pooling of interest's method.

If any remaining difference between cost and the fair value of assets, liabilities and contingent liabilities acquired are negative, the amount is recognized immediately in profit or loss as a bargain purchase gain.

Foreign currency translation

The items recognized in the financial statements of each of the group enterprises are measured at the functional currency used in the primary economic environment in which the individual enterprise operates. The functional currencies of the group enterprises are the following: Romanian Lei (RON) for the Romanian subsidiary and EUR for the parent company in Denmark.

The consolidated financial statements are presented in EUR, which are the functional currency of the parent company and the presentation currency of the Group. On initial recognition, transactions in foreign currencies are translated at the exchange rates at the date of transaction. Exchange differences arising between the transaction date rates and the rates at the date of

payment are recognized in the income statement as financial income and expenses.

Receivables, payables and other monetary items denominated in foreign currencies are translated at the exchange rates at the balance sheet date. Any differences between the exchange rates at the balance sheet date and the exchange rates at the date at which the receivable or the payable arose or was recognized in the most recent financial statements are recognized in the income statement as financial income and expenses.

On consolidation, exchange differences arising from the translation of any net investment in foreign entities and of borrowings and other financial instruments designated as hedges of such investments are recognized in other comprehensive income. When a foreign operation is sold or any borrowings forming part of the net investment are repaid, the associated exchange differences are reclassified to profit or loss as part of the gain or loss on sale.

Balance sheet items including goodwill relating to consolidated enterprises that do not have EURO as their functional currency are translated into EUR based on the exchange rates at the balance sheet date, whereas the income statements of these enterprises are translated at average rates of exchange. Exchange adjustments arising on the translation of the opening equity at the exchange rates at the balance sheet date and net profit/loss for the year at the exchange rates at the balance sheet are recognized in other comprehensive income over equity under a separate reserve for exchange adjustments.

The Group used the following exchange rates for the translation into EUR on 31 December 2020:

| | |
|------|---|
| RON: | Income statement 2020: 1 EUR = 4.837 RON (2019: 1 EUR = 4.782 RON) |
| DKK: | Income statement 2020: 1 EUR = 7.454 DKK (2019: 1 EUR = 7.469 DKK) |

Derivative financial instruments

On initial recognition in the balance sheet, derivative financial instruments are measured at cost and subsequently at fair value. Derivative financial instruments are recognized under other receivables or other payables, respectively.

Changes in the fair value of derivative financial instruments classified as and complying with the requirements for hedging the fair value of a recognized asset or a recognized liability are recorded in the income statement together with changes in the value of the hedged asset or the hedged liability.

Accounting Policies

Changes in the fair value of derivative financial instruments classified as and complying with the requirements for hedging future transactions are recognized in other comprehensive income. When the hedged transactions are realized, the accumulated changes are recognized as part of cost of the relevant financial statement items.

Changes in the fair value of derivative financial instruments applied for hedging net investments in independent foreign subsidiaries are classified in other comprehensive income.

Income statement

Revenue

Revenue from sale of products is recognized when the Group has transferred control of products sold to the buyer and it is probable that the Group will collect the consideration to which it is entitled for transferring the products. Control of the products is transferred at a point in time, typically on delivery. Revenue is recognized net of VAT, duties and sales discounts and is measured at fair value of the determined consideration.

Investment grants are taken to income as actual payment is made when the conditions of payment of grants have been approved by the authorities.

Fair value adjustment biological assets

Fair value adjustments of biological assets include the adjustments of the company's biological assets for the financial year measured at fair value.

Costs of plant breeding, feed, energy and other production costs

Costs of plant breeding, feed, energy and other production costs include the consumption of raw materials and consumables used to achieve net revenue.

Other external expenses

Other external expenses comprise expenses for distribution, sale, administration, premises, bad debts, etc.

Staff costs

Staff costs comprise salaries and wages, social security costs, pension contributions, etc. for the Company's staff.

Amortization, depreciation and impairment losses

Amortization, depreciation and impairment losses relating to intangible and tangible assets comprise amortization, depreciation

and impairment losses for the financial year, calculated on the basis of the residual values and useful lives of the individual assets and impairment testing as well as gains and losses from the sale of intangible assets as well as property, plant and equipment.

Financial income and expenses

These items comprise interest income and interest expenses, the interest portion of finance lease payments, payables and transactions in foreign currencies, mortgage amortization premium/allowance on mortgage debt, etc. as well as tax surcharge and repayment under the Danish Tax Prepayment Scheme.

Tax

Tax for the year, which consists of current tax for the year and changes in deferred tax, is recognized in the income statement by the portion attributable to the profit/loss for the year and recognized directly in equity by the portion attributable to entries directly in equity. Current Danish income tax is allocated among the jointly taxed entities proportionally to their taxable income (full allocation with a refund concerning tax losses).

Balance Sheet

Intangible assets

Acquired intellectual property is amortized over the term of the agreement, but over no more than 5 years. Intellectual property rights etc. are written down to the lower of recoverable amount and carrying amount.

Property, plant and equipment

Other fixtures and fittings, tools and equipment and property plant and equipment in progress are measured at cost less accumulated depreciation. Cost comprises the cost of acquisition and expenses directly related to the acquisition and costs for set-up. In case of assets of own construction, cost comprises directly attributable costs of labor, materials, components and sub-suppliers.

The categories land and buildings are measured at fair value less accumulated depreciation on buildings and impairment losses recognized at the date of revaluation. Valuations are performed with sufficient frequency to ensure that the carrying amount of a revalued asset does not differ materially from its fair value.

A revaluation surplus is recorded in other comprehensive income and credited to the asset revaluation surplus in equity. However, to the extent that it reverses a revaluation deficit of the same asset previously recognized in profit or loss, the increase is recognized in

profit and loss. A revaluation deficit is recognized in the income statement, except to the extent that it offsets an existing surplus on the same asset recognized in the asset revaluation reserve.

An annual transfer from the asset revaluation reserve to retained earnings is made for the difference between depreciation based on the revalued carrying amount of the asset and depreciation based on the asset's original cost. Upon disposal, any revaluation reserve relating to the particular asset being sold is recognized in retained earnings without passing the income statement. Financial expenses directly attributable to purchases, construction or production of a qualifying asset are included as part of the cost of the asset. A qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use or sale. The Group uses the local, effective rate of interest on credit for construction and overdraft facilities for the calculation of expenses for capitalization.

Depreciation of a non-current asset is commenced when it is put into use. Depreciation based on cost reduced by any residual value is calculated on a straight-line basis over the expected useful lives of the assets, which are:

| | |
|---|--------------------|
| Production buildings | 25-40 years |
| Production plant and machinery | 7-15 years |
| Operating fixtures, tools and vehicles | 3-7 years |
| Land is not depreciated | |

The carrying amount of property, plant and equipment is reviewed on an annual basis to determine whether there is any indication of impairment other than that expressed by fair-value or depreciation. If so, an impairment test is carried out to determine whether the recoverable amount is lower than the carrying amount and the asset is written down to its lower recoverable amount.

Biological assets

Agricultural activity is defined as an activity in which biological transformation of biological assets for sale into agricultural produce or another biological asset takes place. Agricultural produce is defined as a harvested product of the Group's biological assets, and a biological asset is defined as living animals or crops.

The Group has assessed that its biological assets consists of breeding herds of gilts, sows and boars, commercial heard of slaughter pigs and unharvested crops.

On initial recognition and at subsequent reporting dates, biological assets are measured at fair value less estimated costs to sell unless fair value cannot be reliably measured on initial recognition.

Accounting Policies

Gains or losses on initial recognition of a biological asset measured at fair value less estimated costs to sell, and subsequent changes in the fair value less estimated costs to sell relating to the biological asset, are recognized in the income statement in the item "Gains/losses on changes in the fair value of biological assets" in the period in which the gain or loss arises.

Biological assets are recognized as current or non-current biological assets depending on the production cycle of the biological asset concerned. Generally, biological assets relating to slaughter pigs and cropping are recognized as current assets. Breeding herds of gilts, sows and boars are recognized as non-current assets.

Investments in subsidiaries

Investments in subsidiaries are recognized and measured under the equity method. This means that investments are measured at the pro rata share of the enterprises' equity value plus or less unamortized positive, or negative goodwill and plus or minus unrealized intra-group profits and losses.

The Parent's share of the enterprises' profits or losses after elimination of unrealized intra-group profits and losses and minus or plus amortization of positive or negative goodwill is recognized in the income statement and the net revaluation reserve under the equity.

Upon distribution of profit or loss, net revaluation of subsidiaries is transferred from the reserve for net revaluation to retained earnings under the equity method.

The purchase method is applied in the acquisition of investments in subsidiaries; see above description under annual report.

Inventories

Inventories are measured at the lower of cost under the FIFO method and net realizable value. The net realizable value of inventories is calculated at the amount expected to be generated by sale in the process of normal operation with deduction of costs to sell and costs of completion. The net realizable value is determined allowing for marketability, obsolescence and development in expected sales sum.

The cost of goods for resale, raw materials and consumables equals landed cost.

The cost of finished goods and work in progress comprises the cost of raw materials, consumables and direct labor as well as directly attributable labor and production costs. These costs also comprise maintenance and depreciation of machinery, factory buildings and equipment used in the manufacturing process as well

as costs of production management.

Agricultural produce is initially recognized at fair value at the point of harvest less estimated costs to sell, and subsequently in inventories up until the point when it is sold to a third party or is used internally as feed. The fair value of agricultural produce at the point of harvest is measured on the basis of the market prices on the markets on which the agricultural produce is expected to be sold or used as feed.

Receivables

Receivables are measured at amortized cost, usually equaling nominal value less write-downs for bad debts.

Prepayments

Prepayments comprise incurred costs relating to subsequent financial years. Prepayments are measured at cost.

Lease commitments

Lease payments, not recognized under IFRS 16, are recognized on a straight-line basis in the profit and loss account over the term of the lease.

Other financial liabilities

Other financial liabilities are measured at amortized cost, which usually corresponds to nominal value.

Deferred income

Deferred income comprises income received for recognition in subsequent financial years. Deferred income is measured at cost.

Cash

Cash comprises bank deposits.

Deferred tax

Deferred tax is recognized on all temporary differences between the carrying amount and tax-based value of assets and liabilities, for which the tax-based value of assets is calculated based on the planned use of each asset.

Deferred tax assets, including the tax base of tax loss carryforwards, are recognized in the balance sheet at their estimated realizable value, either as a set-off against deferred tax liabilities or as net tax assets.

Income tax receivable or payable

Current tax payable or receivable is recognized in the balance sheet, stated as tax calculated on this year's taxable income, adjusted for prepaid tax.

Cash flow statement

The consolidated cash flow statement and the parent cash flow statement are presented using the indirect method and shows cash flows from operating, investing and financing activities as well as the cash and cash equivalents at the beginning and end of the financial year.

Cash flows from the acquisition and divestment of enterprises are shown separately under cash flows from investing activities.

Cash flows from acquired enterprises are recognized in the cash flow statement from the time of their acquisition, and cash flows from divested enterprises are recognized up to the time of divestment.

Cash flows from operating activities are calculated as operating profit/loss adjusted for non-cash operating items, working capital changes, financial income and expenses and income taxes paid.

Cash flows from investing activities comprise payments made in connection with the acquisition and divestment of enterprises, activities and fixed asset investments as well as acquisition, development, improvement and sale, etc. of intangible assets and property, plant and equipment.

Cash flows from financing activities comprise changes in the size or composition of the Parent's share capital and related costs as well as the raising of loans, inception of finance leases, instalments on interest-bearing debt, purchase of treasury shares, and payment of dividend.

Cash and cash equivalents comprise cash less short-term bank debt.

Note 41: Financial risks

Reference is made to the description of financial risks for the Group in the Notes to the Consolidated Financial Statements. The Parent Company is not considered to be subject to any special financial risks other than those disclosed in the Notes to the Consolidated Financial Statements.

Note 42: Assets charged and securities

Letter of subordination has been issued to banks in respect of loans granted to subsidiaries of EUR 3,500k.

Note 43: Guarantees and other contingent liabilities

The parent has made a corporate guarantee for subsidiaries debt to credit institutions. The guarantee is limited to EUR 58.3m. The actual debt was EUR 53.3m end of year.

The Entity participates in a Danish joint taxation arrangement in which DCH International A/S serves as the administration company. According to the joint taxation provisions of the Danish Corporation Tax Act, the Entity is therefore liable from the financial year 2016 for income taxes etc. for the jointly taxed entities and for obligations, if any, relating to the withholding of tax on interest, royalties and dividends for the jointly taxed entities. The total known net liability of the jointly taxed entities under the joint taxation arrangement is evident from the administration company's financial statements.
