## Management's review

### Operating review

#### Principal activities

We provide a leading enterprise cloud platform that powers many of the world's business applications and end-user services by providing software solutions that digitise traditional silos of enterprise computing.

With the advent of cloud as a mainstream consumption paradigm, enterprises are increasingly keen to re-platform existing IT environments with a hybrid cloud architecture that allows business to utilise a private cloud, leverage public cloud where applicable and distribute this hybrid cloud architecture to the edge where their business engages with devices and users. Our solution allows our customers to virtualise various clouds - private, public, edge - into one seamless cloud enabling enterprises to choose the right cloud for the right application

Our solutions converge computing, virtualisation, storage, networking, desktop, governance and security services in one integrated, simple-to-consume solution delivered through software. Further, our software and software as a service ("SaaS") solutions allow enterprises to simplify the complexities of a multi-cloud environment with automation, cost governance and compliance.

We underpin the platform with unique web-scale engineering and one-click operational simplicity that power any scale deployment while giving customers the freedom of choice across various hardware platforms, across various virtualisation solutions and across major public cloud providers.
